

REAL RAIL IMPACT TEST OPTIONS

Why waste money and time on inadequate test results?

CP-R's "real-world" rail impact machine is patented and designed to accurately simulate the effect of the "rail car coupling" process on your products, dunnage and containers.

- Full rail car width
- Full rail car height
- Max specimen weight -12,000 lbs.
- Simulates coupled or uncoupled rail car
- Variable cushioned coupler simulates actual impact deceleration
- Test speeds into cushioned coupler of 1 to 15 mph
